

Webinar Integrating Climate Change and Principles-Based Taxonomy (CCPT) in Financial Institutions' Business

4 October 2023

2:00 pm – 5:30 pm

ABOUT THE PROGRAMME

Bank Negara Malaysia (BNM)'s Climate Change and Principle-based Taxonomy (CCPT) is intended for Financial Institutions (FIs) to integrate climate-related risks and considerations into their business strategies and risk management practices. FIs commenced half yearly submissions to BNM beginning July 2022 on their exposures in line with the CCPT guiding principles and classification system. By understanding and managing climate risks, FIs play a critical role in accelerating their customers transition towards more sustainable practices in business operations and in turn, protects an FI's assets to ensure long term financial stability. Failure to recognise and manage these risks may lead to substantial financial consequences for businesses, as well as FIs that provide financing or investment to those exposed to such risks.

This webinar dives into the CCPT's framework and structure of climate change principles and its relevance to FIs. Climate change challenges on FIs will also be examined including its mitigation and adaptation strategies in developing a sustainability focused strategy with an assessment to specific sectors environmental issues. In addition, the impact of climate change which manifests in various dimensions and influences an FI's business operations will be discussed together with the CCPT's key elements that should be embedded within the due diligence of customers. Given that Islamic financial institutions in Malaysia are encouraged to assess its impact to the environment and society to ensure alignment with the Maqasid Shariah, the speaker will review how FIs may adopt the taxonomy with inclusion of the five principles of Maqasid Shariah. The webinar will also discuss new opportunities and assess new market demands and customer preferences influenced by CCPT as well as case studies of FIs taking advantage of new opportunities.
